

Dac S.p.A.

Dac, leading supplier of goods for large communities, restaurants, hotels, hospitals, schools, business refectories, administrative offices. The company holds a 17,000 sm covered storehouse; 4,000 sm cold storage; 4,000 sm of deep frozen store food; 40 vehicles for multi- stop daily deliveries.

The company

With a turnover of nearly 80 millions euros and more than 15,000 customers, Dac has gained a competitive advantage as a global catering provider for communities, with a wide range of more than 10,000 items. Other points of strength are, in any time, fast and timely deliveries and high quality of goods, with particular regard to frozen and perishable food, which are the most difficult to be preserved.

The challenge

The lack of up-to-the-second monitoring of deliveries weakened Dac ability to compete on the market. In fact, the control was expensive and far from the required performance level. Moreover, Dac would control refuelling operations and the level of the company fuel tank standing within the business parking area.

The solution

Movactive Fleet enables Dac to monitor daily delivery operations in real time, interacting with drivers dynamically and simultaneously. The Logistic operator can check the fleet status via Web (vehicles localizing, delivery plan differences, stop times, drive times, speed, fuel quantity, cold store temperature, and even more), not only from the company pc, but even from the mobile Pda devices.

IN BRIEF

Situation

Dac wished to monitor deliveries in real time. The ultimate aim was improving the level of service, speeding corrective measures whenever it was necessary.

Movactive Solution

Movactive Fleet, the integrated solution for the remote management of fleets.

Specials:

Movactive Fuel- Integrated delivery planning satellite navigation- Driver identification

Results

- Overall view of operational activities
- Fuel monitoring
- Reduced costs of communication with fleets
- Route optimisation
- Reduced costs for deliveries
- Improved productivity
- Increased accuracy of deliveries

“Movactive supported us in the business analysis and proved the big potentials of the solution before realizing it and even before our agreement”

*Daniele Scuola,
Managing director
Dac S.p.A.*

Data is collected and stored in the Movactive Data Centre and available for unlimited time. Vehicles send alarm calls in case of changed routes and alert levels for increased temperature in cold store. The Movactive solution – the one on the market – even integrates the delivery planning with satellite navigation.

Integrated view of the delivery process

With the Movactive remote control, Dac can check the activities of each vehicle, the control panel highlighting planning gaps too. Entering the Movactive dedicated Web page, Dac can monitor all vehicles simultaneously.

Fuel account

Dac can control the fuel quantity delivered to each vehicle/driver from the company tank.

Mobile information

The logistic manager can receive information on wireless devices (pda) and dialogue whenever requested. Checking is not bound to the use of the company net or the land line.

Integrated Satellite navigation

Changing routes and redeploy vehicles is effective and easy. The on board system guides each driver along the daily journey. The same device interfaces communication between vehicles and office.

Return on investment

Movactive solution has significantly reduced delivery and stopping times, mileage, fuel costs, communications with drivers. With Movactive, Dac has increased productivity and improved timeliness and quality of deliveries.
