

### Edil-Group

Edil-Group is a building contractor operating in the industrial field, all over the North of Italy. The company holds its own building yards either under its own name and under other building groups. Customers are both private industrial groups and Public Administrations.

#### The company

Having handled heterogeneous building activities, Edilgroup has gradually developed a flexible organization which can meet different specific needs.

Edil-Group has increased its presence on the real estate market, owing to the vertical management of the construction process.

#### The challenge

Edil-Group couldn't track its resources running in different sites. On the other hand, cost reduction is a key-factor when it comes to bidding and winning contracts. Cost-effective management of resources was crucial for the company survival.

#### The solution

Movactive Fleet collects critical operational data about engine use, running times, drivers activities. Because of that, the company can manage resources more pro-actively and thus more effectively.

#### IN BRIEF

##### Situation

All day long, Edil-Group needed to learn where equipments were deployed and how they were running.

##### Movactive Solution

Movactive Fleet, the integrated solution for the remote management of vehicles.

Specials:

Construction equipments application  
Driver identification

##### Results

- Improve labor management
- Positioning
- Track running and stopping times
- Stop unauthorised use
- Stop thefts
- Increase labour productivity
- Identify under-utilised resources
- Distribute resources more efficiently

Using the Movactive solution is very simple: accessing Movactive web site ([www.movactive.com](http://www.movactive.com)), the operator enters the company dedicated web page and visualizes real time statistics, alert calls and information as: status of the vehicles, location, class of use, working activities, moving beyond pre-set boundaries, working/stopping times and much more.

#### **No more guessing**

Monitoring all resources running in different building yards, enables Edilgroup to identify underutilized vehicles and thus can reallocate them more effectively.

#### **Mobility**

Up-to-the-second and accurate information is available on pc or pda .

#### **Thefts prevention**

Automatic alerts to the Movactive Security Centre are sent in case of theft attempts, violations, unauthorised use, failure of driver identification.

#### **Planning check**

The Movactive remote management helps accurately track the budget and the schedule for each project.

#### **Return on Investment**

Edil-Group has increased its productivity, reduced losses due to theft, unauthorised use of equipment and under-utilised resources.

#### **Invisible technologies**

Movactive technology is seamlessly integrated into the existing business system.

#### **Simple service**

Service planning is easy, efficient and cheap: with reliable and careful counting of labour hours and monitoring of engine-use, today Edil-Group has developed a first-class maintenance program based on actual usage so it performs maintenance only when needed

**“The Movactive application immediately won our esteem for its simplicity and powerful service”**
